

Apartment Solution

Combined with unified management, remote notification, emergency response, free intercommunication, Fanvil offers professional and intelligent solutions for apartments, creating a comfortable, safe, and efficient communication living environment.

Solution Highlights

Cloud Maintenance

Users can remotely maintain the system online, reducing the cost of manual maintenance, easy-to-maintain.

Intelligent Combination

The solution realizes efficient communication by integrating IP phone, intercom, video door phone and indoor station.

Stable and Reliable

HD voice ensures stable communication, and the devices can work perfectly in extreme weather conditions, high reliability.

Simple Deployment

It is very simple to be installed, wired, configured and used, completely inheriting the application method of traditional telephone with simple dialing rule.

Secure Communication

Enterprise-level encryption mechanism is adopted to guarantee the security of user data and protect customer privacy.

Efficient Management

The control center can quickly respond to emergencies, time-saving and high-efficiency.

POWERFUL FUNCTIONS

Unified Management

Apartment managers can apply powerful functionalities like remote deployment, unified management, real-time analysis, and high-efficiency monitoring of devices via FDMCS (Fanvil Device Management Cloud System).

All in One

SIP phones can be easily integrated with the SIP intercoms and door phones to control access, locate emergency calls, do video surveillance and broadcast.

Long-Distance Control of Door

The monitoring center can talk and confirm the visitor via the door phone and open the door remotely. The visitor uses the SIP video door phone call to appoint a room number; the host communicates with the visitor and opens the door via the indoor video station.

One-click for Help

The elevator can be equipped with intelligent intercoms to realize one-click call to the management center in the event of an emergency.

Internal Communication

All indoor phones can be called by others in the same community via internal numbers. The control center can communicate with the residents, inform them of important information or respond to emergency requests.

DIAGRAM

The diagram below illustrates how this solution effectively integrates the console IP phone, intercom and access control for apartments.
